PREPARING THE BLANKS

Cut three blanks 5/8" to 3/4" (or larger, depending on your design) to the length of the brass tubes. Add 1/16" to the length for trimming off. Drill a 7-mm center hole through each

blank. Spread glue over the brass tube insert into the blanks with a twisting motion to spread the glue evenly inside. When the glue dries, square the end of each blank using a barrel trimmer.
